Case Study: ResourceSmart Program - VIC

Developed by Sustainability Victoria (SV) and the Department of Sustainability and Environment (DSE), the ResourceSmart program assists organisations to develop and implement an environment management plan, together with environment policies, targets and actions.

Since 2008, ResourceSmart has been delivered through specialised offerings to Victorian State government agencies, tertiary institutions, hospitals and health service providers. Since this time, Green Steps have been the sole provider of the training component of ResourceSmart, as well as providing occasional one-one coaching sessions.

From Melbourne, to Colac, to Stawell, Bendigo and Benalla, we have run over 100 individual training sessions for representatives from over 250 different organisations in the basics of establishing an environmental management plan, collecting environmental performance data, engaging staff and management, developing environmental policies and establishing committees.
